

## No. of Functional Features Included in the Solution

|                      |                                 |
|----------------------|---------------------------------|
| <b>Date</b>          | 2 July, 2026                    |
| <b>Team ID</b>       |                                 |
| <b>Project Name</b>  | Credit Card Approval Prediction |
| <b>Maximum Marks</b> | 5 Marks                         |

### Functional Features Overview

This document lists all the functional features implemented in the Credit Card Approval Prediction project. Each feature contributes to automating the credit card approval process using Machine Learning and a Flask web application.

### Functional Features

| S.No | Feature Name                    | Feature Description                                                    | Module / Component     | Status (Done / in progress / Pending) | Marks Contribution |
|------|---------------------------------|------------------------------------------------------------------------|------------------------|---------------------------------------|--------------------|
| 1    | Applicant Data Input            | Collects applicant details through a web interface.                    | Frontend (HTML/CSS)    | Done                                  | Medium             |
| 2    | Data Preprocessing              | Cleans, encodes, and prepares input data for prediction.               | Backend (Flask)        | Done                                  | High               |
| 3    | Credit Card Approval Prediction | Predicts whether an application is Approved or Rejected                | Machine Learning Model | Done                                  | Medium             |
| 4    | Prediction Explanation          | Displays a clear, user-friendly explanation for the prediction result. | Explanation Module     | Done                                  | Medium             |
| 5    | Web Application Deployment      | Hosts the application online using Render for live access.             | Deployment             | Done                                  | Medium             |

### Feature Summary:

| Metric                             | Count / value |
|------------------------------------|---------------|
| Total Features Planned             | 5             |
| Total Features Implemented         | 5             |
| Core / Must-Have Features          | 4             |
| Additional / Nice-to-have Features | 1             |
| Features Tested & Verified         | 5             |

## Feature Category Breakdown

| S.No | Category                  | Features in Category | Example Feature                                          |
|------|---------------------------|----------------------|----------------------------------------------------------|
| 1    | User Interface(UI)        | 4                    | Home, Prediction Form, Result, About Page                |
| 2    | Backend / Logic           | 3                    | 3 (Input processing, Prediction, Explanation generation) |
| 3    | Database / Storage        | 0                    | -----                                                    |
| 4    | API / Integration         | 0                    | -----                                                    |
| 5    | Security / Authentication | 0                    | -----                                                    |
